Overview

There are two different types of users within the DegreeAudit++ application: students and advisors. For user documentation, refer to the respective section.

Student

When you navigate to the DegreeAudit++ homepage, a login screen will display. To login, a user must have a username and a password. A student's username is their PawPrint, and their password the same as their MyZou password. If a user's credentials are valid, then the student will be directed to the home page. If a user's credentials are not valid, the user will receive an alert message.

There are a few different features on the home page. There is a collapsible section that contains the students information. This includes the student's name, email, student program, degree program, expected graduation date, and their advisor's information.

Below the student information in the actual degree audit section. The degree audit is composed of three different tabs: Past Classes, Current Classes, and Outstanding Classes. To navigate between these options, the user will click between the three tabs.

Inside each tab is a sortable list of classes. To sort the list, click a column header. Each row contains specific information about the class. This includes the class number, the class name, the student's grade in the class, and the number of credits that the class is worth.

To logout of the application, click the "Log Out" button at the top right of the window. When you logout, the user will be directed back to the login screen.

Advisor

If an advisor is using degree audit, they will use their login and username password to enter the DegreeAudit++ Homepage. If the advisor's credentials are valid, they will be brought to another page to search for a student. If the credentials are not valid, they will be given an error message as an alert.

The advisor should be brought to a different view than a student logging in, which is checked by our backend login process based on the credentials of the user. This view allows advisors to look up individual student's information by their student number. There is a text box where the advisor will be prompted to enter the students number they want to pull information for. After entering the number, the advisor will click on the search button and then brought to another screen that displays all the students information.

This next screen is the student information view that allows the advisor to view student information in a table of past, current, and outstanding classes. The advisor will be able to view collapsible student data for the entered student by clicking on "Student Information +" at the top of the page. This reveals the student's information such as their degree program, their minor, pawprint, advisor, and more. Below this is a table filled with the user's classes (past, current, and outstanding). To sort the list, click a column header. Each row contains specific information about the class. This includes the class number, the class name, the student's grade in the class, and the number of credits that the class is worth.

Finally, the advisor can logout of the application. To logout, click the "Log Out" button at the top right of the window. When you logout, you will be directed back to the login screen.
